Tensioned fabric structures offer a popular and exciting way of creating striking architectural features, such as covered walkways, entrances and shading.

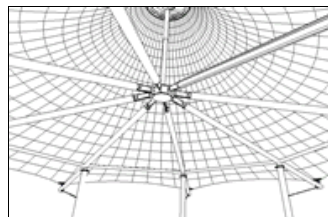

Span Design Limited delivers high quality structures to meet the specific demands of every project.

Bringing together the manufacturing expertise and the specialist design skills required, we offer cost effective and creative solutions that meet the stringent requirements of current British Standards.

Close ties with many specialist suppliers enable us to source fabric, framework and components at competitive prices, but without compromising the professional quality and attention to detail that fabric structures demand.

We work very closely with client architects and engineers to develop structures that satisfy both aesthetic and functional requirements.

We also provide preliminary loading information and drawings to assist in planning and approval.

Installation is carried out by skilled operatives fully experienced in all aspects of site work and in accordance with all health and safety requirements.

For further information, budget prices, or some professional and helpful advice, please contact Phil Windall.
